Steganos Software releases **Steganos Password Manager 14**

Newest Version of Software Enables Users to Safely and Conveniently Store Passwords and PIN Codes on Smartphones

Berlin, Germany, September 28th, 2012 – Steganos Software GmbH, a leading provider of user-friendly security and privacy software for individuals, home offices and small businesses, today announced the availability of Steganos Password Manager 14.

Designed for individuals who want to securely store all of their account log-in information and PIN codes in one central place, the software enables users to safely transport and access this information, whether at home, at work or on the go. The software comes with free apps for iPhone and Android mobile devices, and also enables secure transport of passwords via USB stick. It also features a password generator, which individuals can use to create a secure password in just one click. Moreover, it automatically populates account log-in pages with the correct user name and password (see system requirements). Users only need to remember one password to access the application or can opt to open it with the visual PicPass option instead.

»Recent studies have shown that the common practice of recycling passwords is significantly driving up cases of password theft, which in turn can lead to data breaches and identity theft«, said Gabriel Yoran, managing director of Steganos Software. »To combat cybercrime, it's imperative that Internet users start using different passwords for each bank, credit card or other type of account. Password management software helps individuals create, securely store and manage their most private account information«, he added.

Product Pricing

Steganos Password Manager 14 can be purchased online for $24.95 at www.steganos.com. A free 30-day trial version is available as well. Free mobile apps may be downloaded from the Apps Store or Google Play.

System Requirements:

Steganos Password Manager 14 works on Microsoft Windows® 7 & 8 (32/64 Bit), Vista™ (32/64 Bit) and XP (SP3). The software requires 256 MB of free memory and an Intel Pentium Processor or equivalent. For automatic entry of log-in information, the software requires usage of Firefox 3 or higher, or Internet Explorer 7 or higher.

About Steganos Software GmbH

Founded in 1996 and headquartered in Berlin, Germany, Steganos Software GmbH offers a complete portfolio of user-friendly security and privacy software products for data protection and online anonymity.
