Simply safe anywhere - Steganos Privacy Suite 15 protects data and passwords anywhere they are stored

Berlin, September 30, 2013 - The best all-round protection for digital privacy is now even safer and more convenient. Berlin security company, Steganos, released version 15 of its Steganos Privacy Suite today. Now your photos, videos and private documents can all be encrypted more easily and stored safely in the cloud, secure from hackers. The suite also includes user-friendly email encryption and a powerful password manager. Steganos has adopted the 384-bit AES-XEX algorithm for the first time to encrypt the data.

There are no longer any good reasons for failing to encrypt your data and e-mail correspondence. With the Steganos Privacy Suite 15, users can utilize a user-friendly collection of tools to encrypt anything they want hidden from prying eyes.

The Steganos Privacy Suite version 15 has become more mobile. For example, users can store their passwords locally, on a USB flash drive, and in the cloud. As well as supporting Dropbox, the Steganos Password Manager also allows you to use Deutsche Telekom's online media storage center. All the encrypted passwords can be stored here and accessed at any time with the aid of our free Steganos Mobile Privacy app (for iOS and Android).

With Steganos Safe, Steganos has raised the security bar even higher. All your data is now encrypted using the 384-bit AES XEX algorithm. Our encryption technology is definitely one hard nut to crack – even for the NSA!

In addition, Steganos Safe now offers Dropbox encryption in real time. This means that any changes to the local safe file are automatically synchronized with the safe file in the Dropbox cloud. This real-time encryption ensures that even the cloud provider cannot access the data during upload, since it is encrypted by Steganos Safe before being uploaded.

Like all Steganos products, the Steganos Privacy Suite 15 is developed entirely in Germany, and is therefore subject to Germany's strict data protection laws. Users can be confident that Steganos Software GmbH has no backdoors in its software nor does it grant intelligence services access to user data.

New features:

NEW: 384-bit AES-XEX encryption

NEW: Dropbox encryption in real time

NEW: Even easier to store encrypted data on external hard drives and USB flash drives
